

# Our Ash Trees Are At Risk!

Emerald Ash Borer (EAB) is not in North Dakota yet, but if it arrives, it could change our urban forests drastically.

We don't want these "Before and After" pictures in North Dakota.

## Help prevent Emerald Ash Borer

- Don't bring firewood into North Dakota; use local sources.
- If someone you know is coming to North Dakota, tell him or her to leave the firewood at home. If someone already has brought it, burn it immediately!

## Help Prepare for Emerald Ash Borer

- Learn to know the signs and symptoms of emerald ash borer and report possible occurrences.
- Plant tree species other than ash (*Fraxinus* spp.). EAB only attacks ash trees. There are no known resistant species or cultivars. A high percentage of trees in North Dakota communities are ash.
